Sample Weather Index Term Sheet: Paddy, Kharif 2023, Thanjavur

SAMPLE DOCUMENT - ILLUSTRATIVE ONLY. Not issued by any insurer, bank or government body. Figures are invented for software testing and must not be used for real claims.

Scope

Scheme: weather index based crop insurance, modelled on the Restructured Weather Based Crop Insurance Scheme (RWBCIS).

Crop covered: Paddy (rice). Season: Kharif 2023.

Area: Thanjavur district, Tamil Nadu. Reference weather is the gridded rainfall and temperature at the insured location.

Risk period: 1 June 2023 to 30 September 2023.

Sum insured: Rs. 60,000 per hectare. Farmer premium: 5 percent of the sum insured. Enrolment closes on 15 July 2023.

1. Deficit rainfall (absolute)

1.1 Deficit rainfall cover applies when cumulative rainfall during the risk period is less than 600 mm.

1.2 The payout rises linearly from the trigger of 600 mm to the exit of 250 mm, at which the maximum payout of 40 percent of the sum insured is reached.

2. Deficit rainfall (relative to normal)

2.1 Additional deficit cover applies when the seasonal rainfall deficit relative to the long-period normal is 40 percent or more.

2.2 The payout rises linearly to a maximum of 20 percent of the sum insured at a deficit of 80 percent.

3. High temperature

3.1 High temperature cover applies when cumulative growing degree days over the risk period exceed the normal by more than 15 percent.

3.2 The payout rises linearly to a maximum of 15 percent of the sum insured at an excess of 30 percent.

4. General conditions

4.1 Claims are assessed from weather data alone; no field inspection is needed. Total payout across all covers is capped at 100 percent of the sum insured.

4.2 Growing degree days are computed as the mean of daily maximum and minimum temperature minus a base of 10 degrees Celsius, floored at zero.
